

Japanese Urological Association (JUA) Asian Scholarship

The JUA Asian Scholarship program provides young urologists in Asian countries with support to observe surgeries and procedures, as well as attending clinics and staff activities in Japan for two months. This program supports both urological and endourological training.

... Through valuable guidance by Professor Saika and his team, I could sharpen my understanding in Robotic surgery including partial nephrectomy, radical prostatectomy, and radical cystectomy. During this period in Ehime University Hospital, I have lots of good chances to make educational discussions about the diagnosis, treatment and different approaches in surgical management. These enhanced me to clarify some details in surgical

techniques applied in robotic surgery e.g., Templates of extended pelvic lymph nodes dissection in radical prostatectomy and radical cystectomy, Non-suturing techniques in renorrhaphy during partial nephrectomy. ..

Varat Woranisarakul, MD

2018 Scholar from Thailand to Ehime University

...The Division of Urology deals with a repertoire of oncological cases. At least two days a week are reserved for robotic-assisted procedures. Here, I learnt a great deal about the basic principles of robotic surgery, the intricacies of nerve-preserving prostatectomy, the meticulous planning that goes into achieving the trifecta of partial nephrectomy, and

the proper selection of urinary diversion after robotic total cystectomy. I was even allowed to practice on the simulator-console.....

Kay-Seong Ngoo, FRCS MBChB 2018 Scholar from Malaysia to Tottori University
