

Course Title : Urology Resident's Course 2014, Singapore
Submitted by : Jun Kamei
Department/ Institution : Department of Urology, The University of Tokyo Hospital
Country : Japan
Date : 21st August 2014 (Thursday) to 25th August 2014 (Monday)

A) Background

I was a Japanese urology resident, began the residency at 2010 spring, and got a board certificated in this spring.

B) Course Objectives

These course objectives were to learn basic knowledge for board certificated exam, and at the same time to make friends with urological residents all over the Asia of our own generation. I think these objectives were very good and I was satisfied with them.

C) Lessons Learnt

The contents of this lecture were basic, but it was useful for me to learn paediatric urology, because I did not examine paediatric patients in Japan and I'm not familiar to this area.

D) Benefits

I was enjoyed talking and discussing with other country's urologists. It was very It was very good opportunity to realize that education systems in foreign country are quite different from those in Japan.

E) Recommendation

I want to take lectures on bladder tumour and kidney tumour. Last day's case discussion was not attractive. I think that it was better that attendants were separated to some groups and make group discussion.

F) If you are asked to rate this course over 10, what is your rating?

10. I was satisfied with this course very much. I want to recommend my junior residents to apply to this course next year.

G) Networking

We made the facebook group with this course members. I was grad to make many friends with foreign residents.

H) Photographs with captions

After final lecture, with Professor KT Foo, the chairman of SUA.
